PROFESSIONAL SUMMARY

Senior .NET Developer and Tech Lead with 8+ years of enterprise software engineering experience across wealth management, financial services, brokerage, CRM, and global trade. Actively develops production software using C#/.NET, REST APIs, SQL Server, and enterprise integrations. Combines backend implementation, application troubleshooting, and technical guidance with additional product ownership. Translates business requirements into working software, collaborating with engineering, QA, and business stakeholders from requirement clarification through integration, testing, release, and production support.

CORE TECHNICAL SKILLS

Languages & Frameworks: C#, .NET / .NET Core, ASP.NET Core, ASP.NET MVC, Web API, microservices

Frontend & Data Access: Angular, React, Entity Framework, Entity Framework Core (EF Core), ADO.NET, Dapper

Databases & Data: SQL Server, Azure SQL, Redis, MongoDB, relational data modeling, SQL queries, query optimization

Integration & Messaging: REST APIs, third-party APIs, IBM MQ, RabbitMQ, enterprise integrations, asynchronous processing, data mapping

Cloud & DevOps: Microsoft Azure, AWS, Azure DevOps, GitHub Actions, Git, Docker, Kubernetes

Engineering & Observability: Postman, Splunk, Serilog, Seq, debugging, integration testing, production support, software development lifecycle

Product & Delivery: Agile, SAFe, Jira, Confluence, backlog management, user stories, acceptance criteria, sprint planning, UAT, stakeholder management, release planning

PROFESSIONAL EXPERIENCE

INTELLIFLO | Hyderabad, India

October 2021 - Present

Senior Product Owner (Tech Lead)

- Develop production C#/.NET applications for wealth management and CRM, maintaining hands-on engineering as the primary responsibility while also owning product requirements and delivery priorities.
- Design and implement backend services, REST API endpoints, and business logic for advisor workflows and client-information processing, translating business requirements into application behavior.
- Implement SQL Server data-access functionality and validation rules to support consistent client information across application modules and connected enterprise services.
- Engineer integration components for Microsoft Outlook and Money Alive, implementing API communication, partner data mapping, input validation, and error handling within the advisor platform.
- Develop Intelliflo IQ and Client Review functionality, connecting assistant-generated information and client data with application workflows and supporting backend processing.
- Resolve production defects by investigating backend services, database interactions, and integration behavior; deliver application fixes and enhancements through sprint releases.
- Guide implementation approaches and dependency planning with engineering teams; collaborate with QA to validate service behavior, integration scenarios, and release readiness.
- Own backlog priorities, user stories, and acceptance criteria alongside development; coordinate sprint planning, UAT, releases, and stakeholder expectations in an Agile / SAFe environment.

BROADRIDGE FINANCIAL SOLUTIONS | via Tectoro

April 2020 - October 2021

Senior Software Engineer

- Developed .NET application components for brokerage and financial-services platforms, implementing backend business logic and enterprise integrations for account-transfer workflows.

- Implemented ACATS account-transfer functionality, including transfer validations, transaction-processing rules, and application data handling between financial systems.
- Integrated IBM MQ messaging to support asynchronous account-transfer processing and communication between distributed financial applications.
- Resolved application and integration defects, tested service behavior with QA, and clarified functional requirements with business analysts to deliver production fixes and sprint enhancements.

GTKONNECT | Acquired by EY

April 2018 - April 2020

Associate Software Developer

- Developed Global Trade Management application modules using C#/.NET, REST APIs, microservices, and SQL Server to support enterprise customs and trade-compliance processes.
- Implemented CBP and ABI integration workflows, translating customs and regulatory requirements into application business rules, validation, and exchanges with external systems.
- Built Import Security Filing (ISF) and Foreign Trade Zone (FTZ) functionality, implementing backend processing and data handling for trade-compliance workflows.
- Developed REST API endpoints and database interactions; resolved software defects and collaborated with QA to validate functionality and support releases and production systems.

SELECTED ENGINEERING PROJECTS

Intelliflo IQ | AI-Assisted Advisor Workflows

- Implemented data mapping and validation supporting automated population of 190+ platform fields, connecting assistant-generated information with engagement and advice workflows.
- Developed application components that translate assistant output into platform data and advisor-facing functionality, validating field values and workflow behavior with QA.

Microsoft Outlook Integration | Wealth Management

- Engineered backend integration services connecting Outlook communication workflows with the wealth-management platform, enabling communication features within the advisor application.
- Implemented API request and response handling, data exchange, validation, and integration error handling; tested end-to-end behavior across connected application workflows.

Money Alive API Integration | Financial Education

- Developed integration service logic connecting the advisor platform with third-party financial education functionality for clients and advisors.
- Mapped partner API data to application workflows and implemented validation and error handling so external service responses could be consumed by platform features.

ACATS Account Transfer | Brokerage Applications

- Implemented .NET processing logic and business validations for brokerage account transfers, combining application data handling with integrations between financial systems.
- Developed IBM MQ message handling for asynchronous transfer processing; investigated service and messaging defects to support production account-transfer workflows.

Global Trade Compliance | CBP, ABI, ISF & FTZ

- Built .NET services and APIs supporting customs integrations, Import Security Filing, and Foreign Trade Zone processes within Global Trade Management applications.
- Translated compliance requirements into backend business rules, SQL Server operations, and integration validation, supporting trade data processing and enterprise workflows.

EDUCATION

Bachelor of Technology (B.Tech) | Godavari Institute of Engineering & Technology | CGPA: 9.1 / 10
